RE: Xcel Energy's ENERGY STAR® New Homes Update

Participating Colorado Homebuilders and Raters:

Program Update:

The ESNH Program processed 1284 completed houses during the January 2021 billing period. Approximate year-to-date net energy savings are 20,220 Dekatherms and 1,073,232 kilowatt-hours. Total year-to-date builder rebates earned are approximately \$556,170.

November and December 2020:

As a reminder, homes that were submitted November 1st through December 31st have been deferred to January of 2020. These homes are currently being processed as part of January and rebates will be sent out accordingly.

2020 Program Homes:

Any homes with a site visit date of 2020 need to be submitted to the program by **July 31st**. These homes are still eligible for full rebates so long as they are submitted on or before July 31st and meet all program requirements. For any homes in question please feel free to reach out using the contact information below.

Administrative Update:

COVID-19 and keeping all program participants and supporters safe and healthy remains our highest priority.

While a vaccine is being distributed, its production still lags. Even with the future goal of 1.5 million inoculations per day, it will take more than seven months to reach the entire US population.

Residential Science Resources and Xcel Energy expect field personnel to follow trade, local, and state health and safety guidelines to the best of their ability.

Thank you again for your continued support of Xcel Energy's ENERGY STAR New Homes Program and please do not hesitate to contact me if you have any questions or concerns.

Sincerely,

Hannah Engelhart
